

Neonatology (NICU)

The Clarke Neonatal Intensive Care Unit at FirstHealth Moore Regional Hospital is a Level III facility caring for low-birth-weight premature infants as well as full-term infants requiring highly specialized medical treatments. The availability of comprehensive neonatal intensive care services in Pinehurst eases the burden of families in the region of traveling long distances to visit a newborn child. Staffed by highly trained and compassionate professionals, the unit is equipped with the latest technology. Our family-centered approach emphasizes the bonding process between newborns and their families. Discharge planning includes coordination of care with the infant's primary care physician.

Nicholas Lynn, M.D.

Dr. Nicholas Lynn leads a patient-care team that includes neonatal nurse practitioners, neonatal intensive care nurses and neonatal respiratory therapists. The physicians and the neonatal nurse practitioners work collaboratively with the staff to provide around-the-clock intensive care for their patients, and they are always available to talk with families about their baby's status and progress.

Our certified lactation consultants provide breastfeeding support for mothers.
