Maternal-Fetal Medicine is located at 35 Memorial Drive near Entrance 1 of the FirstHealth Specialty Centers Building in Pinehurst. Patients are encouraged to park on the left side of the building (closest to Page Road) as they will exit the building facing that parking lot.
For patients whose pregnancies are considered high-risk, the FirstHealth UNC Maternal-Fetal Medicine program at Moore Regional Hospital offers obstetrical care for women with pregnancies that are complicated by maternal disease, such as diabetes or hypertension, or any problem with the fetus, such as congenital abnormalities.

Specialists in maternal fetal medicine have two to three years of additional formal education as well as clinical knowledge and experience in the obstetrical, medical, genetic and surgical complications of pregnancy and their effects on mother and child. They have advanced training in dealing with complex diagnostic and therapeutic procedures during pregnancy.

FirstHealth UNC Maternal-Fetal Medicine at FirstHealth Moore Regional can assist in the care of your obstetric and gynecologic patients.

Conditions evaluated and/or treated may include:
