At FirstHealth Moore Regional Hospital, state-of-the art robotic technology allows the surgeon’s hands to make the precise movement of micro-instruments through small surgical incisions.

For the patient, benefits of robotic surgery may include significantly less pain, less blood loss, less scarring, a shorter hospital stay, a shorter recovery time, a faster return to normal daily activities, and, in many cases, better clinical outcomes.

To refer a patient, please contact the provider offices directly at the number listed below each specialty.
