

Transition Care Clinic

A Valuable Extension of Your Practice

How Your Patients Can Benefit from the Transition Care Clinic

The Transition Care Clinic is designed to complement your practice in two important ways. The first is to support you in the management of complex cases where patients, recently discharged from the hospital, have chronic diseases requiring time and resources that are not always easy to provide in your busy practice. The second is to provide care to stable chronic disease patients when you are not available due to a busy clinic schedule. In the very near future, we will also be able to extend your capabilities by delivering treatments, such as IV diuresis, that require long durations or continuous monitoring to stable patients in order to avoid hospitalizations.
